

VAN NORMAN LAKE AQUATIC VEGETATION BIOVOLUME MAP

LEGEND

—5— Contours

PERCENT BIOVOLUME

Note: Biovolume is a measure of the height of plants in the water column. A biovolume measurement of 50% indicates plants occupy one-half of the water column. Hydro-acoustic depth measurements conducted in July of 2015.

Hydro-acoustic data processed by Navico. Lake shoreline digitized from aerial orthorectified photography (Source: USDA FSA 2014). Lake elevation derived from USGS topographic map (Clarkston Quadrangle 1982).
